

Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.

LETTE TO THE EDITOR

Bioactive Lipids and Coronavirus (COVID-19)

To the editor,

Dear Editor, we found that the article on Bioactive Lipids Inactivate Coronavirus (COVID-19)? is very interesting (1). Das noted that “*Oral or intravenous administration of AA and other unsaturated fatty acids may aid in enhancing resistance and recovery from SARS-CoV-2, SARS and MERS infections* (1).” Das UN, et al. discussed on complex inflammatory process in new disease and possible role of bioactive lipids. In fact, if bioactive lipid is useful, there must be a pathway showing interrelationship between bioactive lipids pharmacological actions and virus pathogenesis process. Possible unwanted adverse effect of bioactive lipids should be mentioned. The effects on platelet and thromohemotasis system might occur (2) and this might superimpose the thrombohmostatic disorder in COVID-19 (3). This topic is the interesting issue for further research.

Conflict of interest

None
